

Condition	Intervention	Desired Result
Pre-eclampsia	Calm environment & rapid transport	Hospital treatment to lower BP
Shoulder Dystocia	ALARM sequence	Deliver fetal shoulders/ reduce hypoxic injury
Umbilical cord Prolapse	Gaskin/ Exaggerated Sims/ Counter pressure	Reduce fetal hypoxia/death from cord compression
Breech	Hands off until birthed to the umbilicus/use gravity/ Mariceau-Smellie-Veit Maneuver	When nape is visible, somersault baby around pubic bone to allow face to deliver
Postpartum Hemorrhage	Placenta delivered: use extrauterine massage/ bimanual compression of uterus	Reduce blood loss greater than 500cc postpartum
Twins & Multiple Gestation	Considered high risk: clamp & cut cord of first baby immediately	Prepare for complicated birth for next baby(ies)

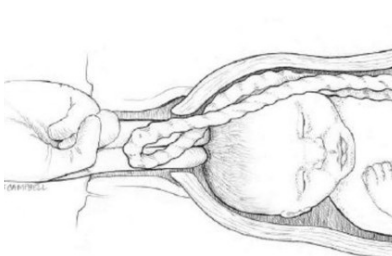

McRoberts Maneuver

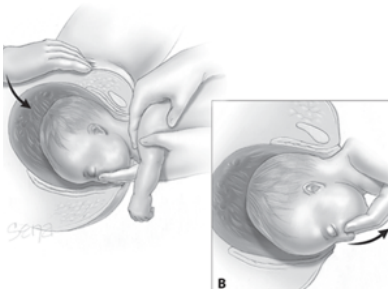

Gaskin Position

Exaggerated Sims Position

Counter pressure

Mariceau-Smellie-Veit Maneuver

Bimanual uterine compression
